

GRAIN INSECT CONTROL PLAN

INSECTO ---- A dry powder that kills insects:

SPECIFIC TARGET AREAS

1. Empty bin and plant treatment.
2. Seasonal stored grain (less than one year).
3. Topdress stored grain.
4. Long term grain (one year or more).
5. Warehouses and buildings.

HERE'S HOW:

EMPTY BIN / PLANT TREATMENT INCLUDING FLAT STORAGE

Into cleaned facilities, apply INSECTO at the rate of 1# per 1,000 square feet of floor and wall space. To place INSECTO into every area insects could hide, your application techniques may include using the aeration systems, and operating the belts, augers, elevators, etc. INSECTO remains and continues working killing insects until it is physically removed. Best way to spread is with air.

SEASONAL STORED GRAIN TREATMENT PLAN (less than one year)

Wheat and small grains - Treat 1# per ton throughout. Then add 4# per 1,000 sq. foot as a top dressing or barrier.

Corn - Treat the bottom 10% of grain that goes into each bin at the rate of 1# per ton. Then treat every 5th load at 1# per ton. Treat the top 10% at 1# per ton. After the bin is full, add 4# per 1,000 sq. ft. as a top dressing or barrier.

RESULT: The bottom, sides and top of bins have a protective barrier of INSECTO.

LONG TERM STORAGE:

Grain should be totally treated at the rate of 1# per ton throughout. If facility is such that insects have ready access, those areas should be reinforced with a 1# per 1,000 sq. ft. Example: periodic dusting of tops, aeration ducts, and grain moving equipment should be carried out. When receiving known infested grain, it should be treated with 1 to 2# per ton as received, or, if in house, turned, cleaned, and treated.

WAREHOUSES AND BUILDINGS:

Dust floors, walls, and ceilings at the rate of 1# per 1,000 sq. ft. of surface area. Additional placement of INSECTO should be at known points of insect habitation such as cracks, doors, along wall base, etc. Again the way to spread is with air.

A product whose time has come!

Insect resistance to INSECTO - NONE!

Long lasting residual effect. EPA REGISTRATION #48598-1

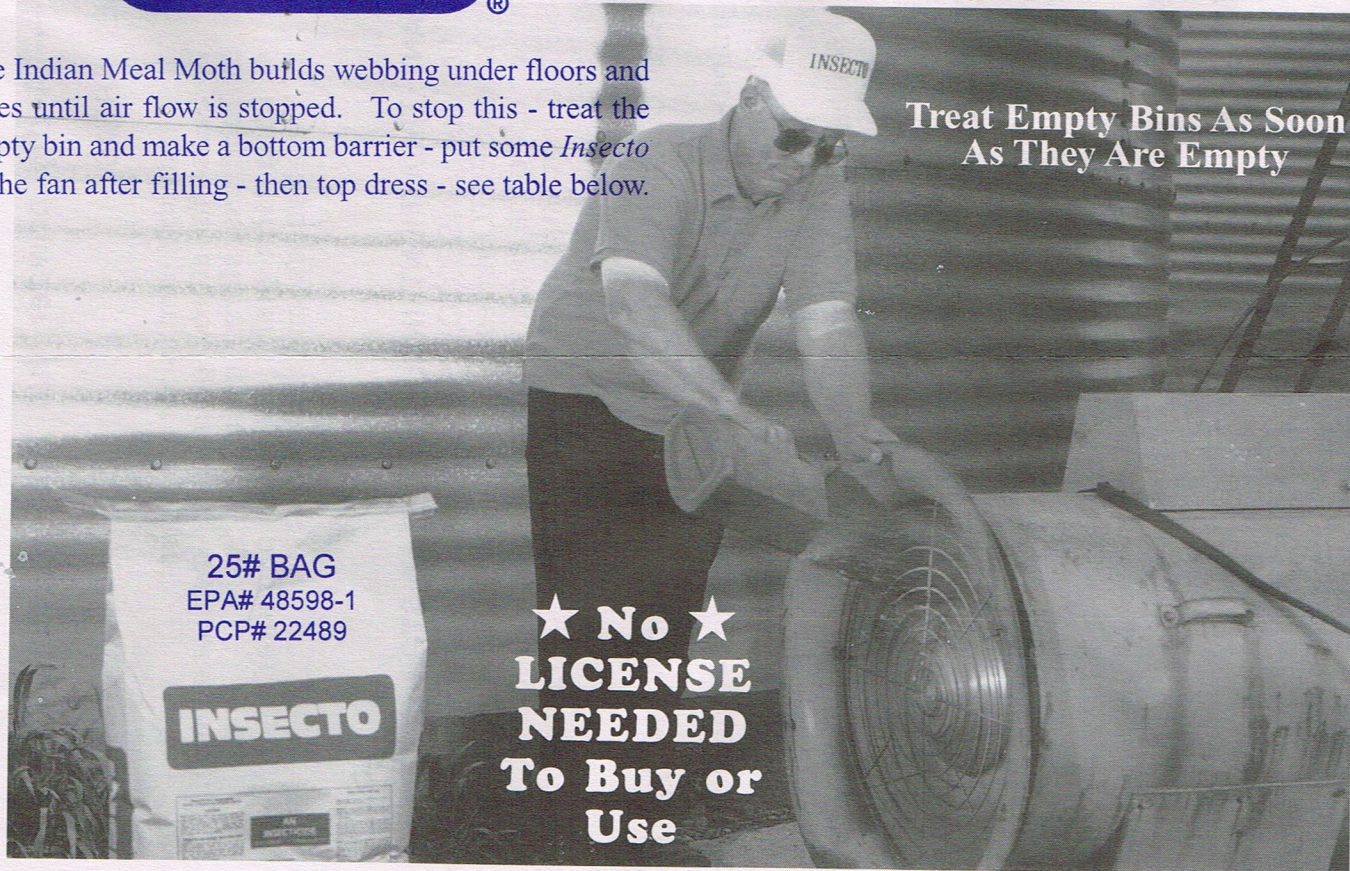

TREAT YOUR EMPTY BINS QUICK... EASY... INEXPENSIVE

with **INSECTO**® a dry powder

OMRI™

Treat Now to Control Insects

When treating empty bins,
why not treat for Indian Meal Moths also?
They are resistant to many other compounds.
Insecto is excellent for killing Indian Meal Moth with long-term residual!

Here's How:

1. Clean bin.
2. Measure amount of INSECTO*.
3. Turn on fan that blows into bin.
4. Pour INSECTO into air flow as fast as fan will allow.
5. When dust starts coming out top of bin, shut fan off - YOU'RE FINISHED.

Bin Size	Capacity	Bin #	#'s to treat empty bin *	Bottom 2ft. Bottom Barrier	Top 2 Ft. Top barrier	Cost per Bu empty, top, & bottom
18x18	4,290	bu.	2	11	11	.016
24x24	10,200		3	20	20	.0056
30x30	18,700		4	31	31	.0054
36x30	27,300		5	45	45	.0052
42x30	34,600		6	60	60	.0055
48x27	45,800		6	80	80	.0054

* Amount of INSECTO is 1# per 1,000 sq. ft of floor and wall surfaces.

** After bin is full, topdress with 4# per 1000 sq ft

A big coffee can (2lb 7oz) holds about 1#

You will never treat your empty bins the old way again!

Rid Your Home of Bugs ... Use

INSECTO

Kills

Ants

Spiders

Crickets

Roaches

Fleas

Centipedes

Millipedes

Silverfish

Earwigs

Boxelder Bugs

Ladybugs

Slugs

Insecto is a dry powder that kills bugs by scratching them and absorbing the wax on their bodies, causing them to crack open, their body fluids to leak out, and die of dehydration.

If you have an outside skeleton (exoskeleton), you die. ALL bugs-ants, spiders, crickets, roaches, fleas, worms, millipedes, centipedes die.

Insecto is made of silicon dioxide derived from diatomaceous earth and human food-grade attractants. Silicon dioxide (diatomaceous earth) is the skeletons of prehistoric algae. It is odorless and non-staining.

Use it in your kitchen, under and behind kitchen cabinets, under and behind stoves, refrigerators, other appliances, and furniture. Put it any-where in your house -- in the basement, crawl space, garage, attic or any-where you find bugs. It can be used outside around the foundation to kill crickets, boxelder bugs and many others. It is excellent in cabins, campers, and woodpiles.

Just Squeeze bottle and puff wherever you see bugs - from basement to attic.

Of course it has a money-back guarantee.

Try it-you'll love it!

INSECTO Formula 7, Kills Fire Ants Fast!

OMRI™
Listed
Organic Materials Review Institute

E.P.A. Reg. No. 48598-3

If fire ants have invaded your property... you now have a *fast, economical and environmentally correct* way of eliminating them.

Natural INSECTO FORMULA 7 kills fire ants in a week or less when used as directed. Ten to fifty mounds will be prevented from forming from every mound eliminated with Natural INSECTO FORMULA 7.

Natural INSECTO FORMULA 7 is a plant extract concentrate that offers these advantages:

1. ***Kills the queen and ant colony...*** usually within 15 minutes after treatment in COOL weather.
2. ***Economical and does not pollute the environment.*** Mixing ratio is one ounce of Natural INSECTO FORMULA 7 per gallon of COOL water.
3. ***Saturation of the average fire ant mound usually requires only two to five gallons of mixture.*** Water is a safe carrier and takes the mixture throughout the mound.
4. ***No costly equipment necessary...*** requires a five gallon bucket to mix the solution.

Testing at Texas A&M shows a 100% kill when used as directed. Just mix 2-5 oz. of INSECTO Formula 7 concentrate with 2-5 gallons of water and drench the mound. Within minutes you'll see the dead ants, and within five

days the mound will be inactive. The best time to apply INSECTO Formula 7 is in the morning before it gets too hot. INSECTO Formula 7 concentrate works best during the cooler months of the year, but does work year round. Study after study shows that the drenching method is the best way to control the spread of Fire Ants. We know it is easier to throw down the granulars/baits, but when they don't work, all that's been accomplished is a waste of time and money.

**** One quart of INSECTO Formula 7 concentration will treat approx. 10 mounds, one gallon will treat approx. 40 mounds. ****
